Summary

MERN Stack Developer building AI-integrated full-stack web applications with React.js, Node.js, Express.js, and MongoDB. Built an AI-powered search engine with multi-model integration (Gemini, Grok, LangChain) and real-time streaming, and a TensorFlow.js emotion detection app. Experienced with JWT authentication, Redux state management, and modular frontend/backend architecture. B.S. Computer Science, COMSATS University Islamabad (2024-2028).

Technical Skills

- **Languages** : JavaScript (ES6+), TypeScript, Java
- **Frontend** : React.js, Redux, HTML5, CSS3, Tailwind CSS, SCSS, GSAP
- **Backend** : Node.js, Express.js, REST APIs, JWT Authentication, bcrypt, Socket.io
- **Database** : MongoDB, Mongoose, Aggregation, Indexing, Transactions
- **AI & APIs** : LangChain, Gemini API, Grok API, Tavily API, Claude API, TensorFlow.js, Web Speech API
- **Tools** : Git, GitHub, Postman, VS Code, Vercel, Render

Projects

Perplexity-Style AI Search Engine

[\[Live Preview\]](#) [\[GitHub\]](#)

- Built a full-stack AI search app integrating Gemini API, Grok API, and LangChain with model-switching logic, serving real-time streamed responses over Socket.io.
- Connected Tavily API for live web search enrichment, implemented Web Speech API for voice input, and stored conversation history in MongoDB for multi-turn contextual queries.
- Implemented JWT authentication with bcrypt password hashing and input validation, Redux for global state management, and a 4-layer modular React architecture (UI, Hooks, Services, Utils).
- Designed responsive UI with React.js and Tailwind CSS supporting markdown rendering, conversation history, and multi-model switching.

Moodify - Emotion-Based Music App

[\[Live Preview\]](#) [\[GitHub\]](#)

- Built a real-time facial emotion detection app using TensorFlow.js running entirely client-side, classifying 7 expression categories and serving mood-matched music recommendations.
- Designed mood-to-music mapping logic connecting emotion classifications to curated playlists via an Express.js REST API with middleware-based error handling.
- Structured the backend with modular route separation, controller patterns, and environment-based configuration for clean deployment on Render.

Experience

DevelopersHub Corporation, Punjab

Frontend Web Development Intern

Feb 2026 - Mar 2026

- Built responsive, cross-browser web applications using HTML5, CSS3, JavaScript, and React.js on real-world client projects.
- Developed mobile-first frontend interfaces applying modern UI/UX principles in a collaborative team environment.

Sheryians Coding School, Pakistan

Full Stack Trainee (Cohort 2.0)

Nov 2025 - Present

- Building full-stack applications with React.js, Node.js, Express.js, and MongoDB through project-based training with AI integration.
- Implementing JWT authentication, WebSocket communication, LangChain-powered AI features, and real-time data streaming.

Education

COMSATS University Islamabad, Attock Campus

Sep 2024 - Sep 2028

Bachelor of Science in Computer Science

Relevant Coursework: Data Structures, Algorithms, Database Systems, Operating Systems, Object-Oriented Programming

Certifications

Full Stack MERN Development

Sheryians Coding School • Pakistan • 2025 - Present

Frontend Web Development Internship

DevelopersHub Corporation • Punjab, Pakistan • 2026
